The next generation
Lightning-based
# financial infrastructure

Join us on Github

Our technology stack

Pool

Lightning Pool connects users who need access to bitcoin liquidity to those who have capital to deploy on the Lightning Network.

Learn more about Pool ❯

Loop

Intended to help users, businesses, and routing node operators keep their channels open indefinitely by using non-custodial Bitcoin contracts to keep the liquidity flowing.

Learn more about Loop ›

Lightning Network Daemon

Our very own implementation of a Lightning Network Node provides superior reliability, interoperability and security for global-scale financial applications.

Learn more on Github ›

Neutrino

A light client specification that allows non-custodial Lightning wallets to verify transactions privately, trustlessly, and a full sync to the Bitcoin blockchain.
